## History:

ROUTINE-Q

MOTHER@63/AUNT@60/PAT GRANDMOTHER@50'S

## History

Patient is 38 years old and is seen for screening. Patient has the following family history of breast cancer: Mother age 63, Breast Cancer, unknown type; Paternal grandmother age 40, Breast Cancer, unknown type and Aunt age 60, Breast Cancer, unknown type. There is no personal history of breast cancer. The patient's last clinical breast exam was 4/2009.

## Comparison

The present examination has been compared to prior imaging studies performed at an outside location on 09/04/2006.

## Bilateral Mammogram Findings

The following views were obtained: Bilateral craniocaudal, and bilateral mediolateral oblique.

The breasts are extremely dense, which lowers the sensitivity of mammography.

No masses, significant calcifications or other abnormalities are
