

Interviews with 606 adult Americans conducted by telephone by ORC International on April 30, 2013. The margin of sampling error for results based on the total sample is plus or minus 4 percentage points.

The sample includes 446 interviews among landline respondents and 160 interviews among cell phone respondents.

1. How worried are you that you or someone in your family will become a victim of terrorism -- very worried, somewhat worried, not too worried, or not worried at all?

## METHODOLOGY

A total of 606 adults were interviewed by telephone nationwide by live interviewers calling both landline and cell phones. All respondents were asked questions concerning basic demographics, and the entire sample was weighted to reflect national Census figures for gender, race, age, education, region of country, and telephone usage. Among the entire sample, $33 \%$ described themselves as Democrats, $22 \%$ described themselves as Republicans, and $45 \%$ described themselves as Independents or members of another party

Crosstabs on the following pages only include results for subgroups with enough unweighted cases to produce a sampling error of $+/-8.5$ percentage points or less. Some subgroups represent too small a share of the national population to produce crosstabs with an acceptable sampling error. Interviews were conducted among these subgroups, but results for groups with a sampling error larger than $+/-8.5$ percentage points are not displayed and instead are denoted with "N/A".
