## METHODOLOGY

In Florida, a total of 1,503 adults, including 410 registered Republicans, were interviewed by telephone using standard random-digit dialing methods. All respondents were asked questions concerning their registration status and basic demographics, and the entire sample was weighted to reflect statewide Census figures for gender, race, age, education and region of the state. 369 likely voters were identified based on each respondent's party registration status (only registered Republicans were selected), stated intention to participate in the 2012 primary, interest in the campaign to date, and self-reported voting history.
